Cranial Helmet (Protective)

CARE & USE GUIDE

General Description
A cranial helmet (See Figure 1) is a plastic protective head covering or band that is used to protect the head from injury. It is recommended while recovering from a brain injury or other trauma to the head. The helmet offers full ventilation without compromising head coverage. A strong, polyethylene shell covers a shock absorbent foam liner.

Application
When first sizing, the strap under the chin should be adjusted to fit by pulling the strap through the slide buckle. For easy on and off, use the snap side. The helmet should fit comfortably without being too tight or too loose. The front of the helmet should be a little above the eyebrow level. Make sure there is at least one finger space between your chin and the strap.

Cleaning and Maintenance
The helmet should be washed regularly in warm, soapy water. Harsh chemical cleaners are not recommended; they may damage the vinyl. Periodically check that all hardware, straps and fasteners are in good working order. If not, contact your orthotist immediately.

About CPO Services
Comprehensive Prosthetics & Orthotics exists to give those in need of our services the hope and independence to live fuller and more complete lives. We provide prosthetics and orthotics services, utilizing our on-site custom design and fabrication capabilities to ensure a comfortable and secure fit. We consider ourselves a partner in your care and will work with you, your physician and your physical therapist to ensure a seamless continuum of care.

Night Compression Garments
CARE & USE GUIDE (cont.)

Cleaning and Maintenance
• JoViPak® garments should be worn and laundered with care.

• Frequency of washing depends upon the individual and the amount of perspiration created in a night. A guide to laundering the sleeve may be, “as often as you change your sheets.”

• Machine wash JoViPak® sleeves and pads in warm (NOT hot) water on the gentle or delicate cycle using a mild detergent. Liquid detergent is preferred. NO WOOLITE. An extra rinse cycle to ensure all soap residues are removed, helps to extend the life of your garment. The standard spin cycle is sufficient to get water out of the foam.

• Dry garment on permanent press or a lower heat setting. Air drying is not recommended since the foam may collect bacteria.

• The JoVi Pak Outer Jacket® should be washed separately by hand and line dried.

• Please note, the darker colors of JoViPak® will bleed, particularly black or royal blue cotton/lycra®. It is suggested they are not washed with light colored clothing.

• The Dycem® sheet can be cleaned by wiping with a damp cloth.

Tips and Problem Solving
• Wear rubber gloves to extend the life of the garment.

• A garment that no longer fits properly due to a change of the extremity size or the loss of garment compression is not an effective treatment aid.

• Handle your garments with care as they are Non Exchangeable, Non Returnable and Non Refundable.
